SK hynix Q3 2026: Record Revenue of KRW 104.6 Trillion [USD 78.1 Billion] as Memory Supply Stays Tight

Published: 22 November 2026 | Author: David Daoud

SK hynix reported consolidated revenue of KRW 104.6 trillion [USD 78.1 billion] for the third quarter of 2026, up 31.9% from the second quarter and 327.9% from a year earlier. Operating profit reached KRW 83.3 trillion [USD 62.2 billion], and the company described an operating margin of about 80%. The results are provisional and have not yet been audited, and the external auditor’s review is still pending.

Memory pricing and the HBM4 ramp did most of the work, and the company said supply will stay short of demand through 2030. For ITAD providers and recyclers, that means memory stays in service longer, so the recoverable components from retired server hardware are likely to arrive later and in more concentrated streams. This is analysis, not a company statement.
