

Analysis: What the Latest Devices Tell Us About the Future of Enterprise IT and ITAD

Published: 1 April 2025 | Author: David Daoud

A new generation of computers is beginning to hit the market. Profiling them suggests that we should expect a profound reshaping of the enterprise hardware landscape to take place in the months and years to come. The technological advancements that have emerged over the past two years have been driven by the rise of generative AI and large-scale inference, and how AI is reshaping hardware is becoming more evident as we reach the midpoint of 2025. At Compliance Standards we have begun to track the sustainability features of new tech devices, rating them along the number of criteria that give us a glimpse of how they are designs and how different they are compared to the previous generations of systems, and our findings are startling.
